

GPA Calculator Project

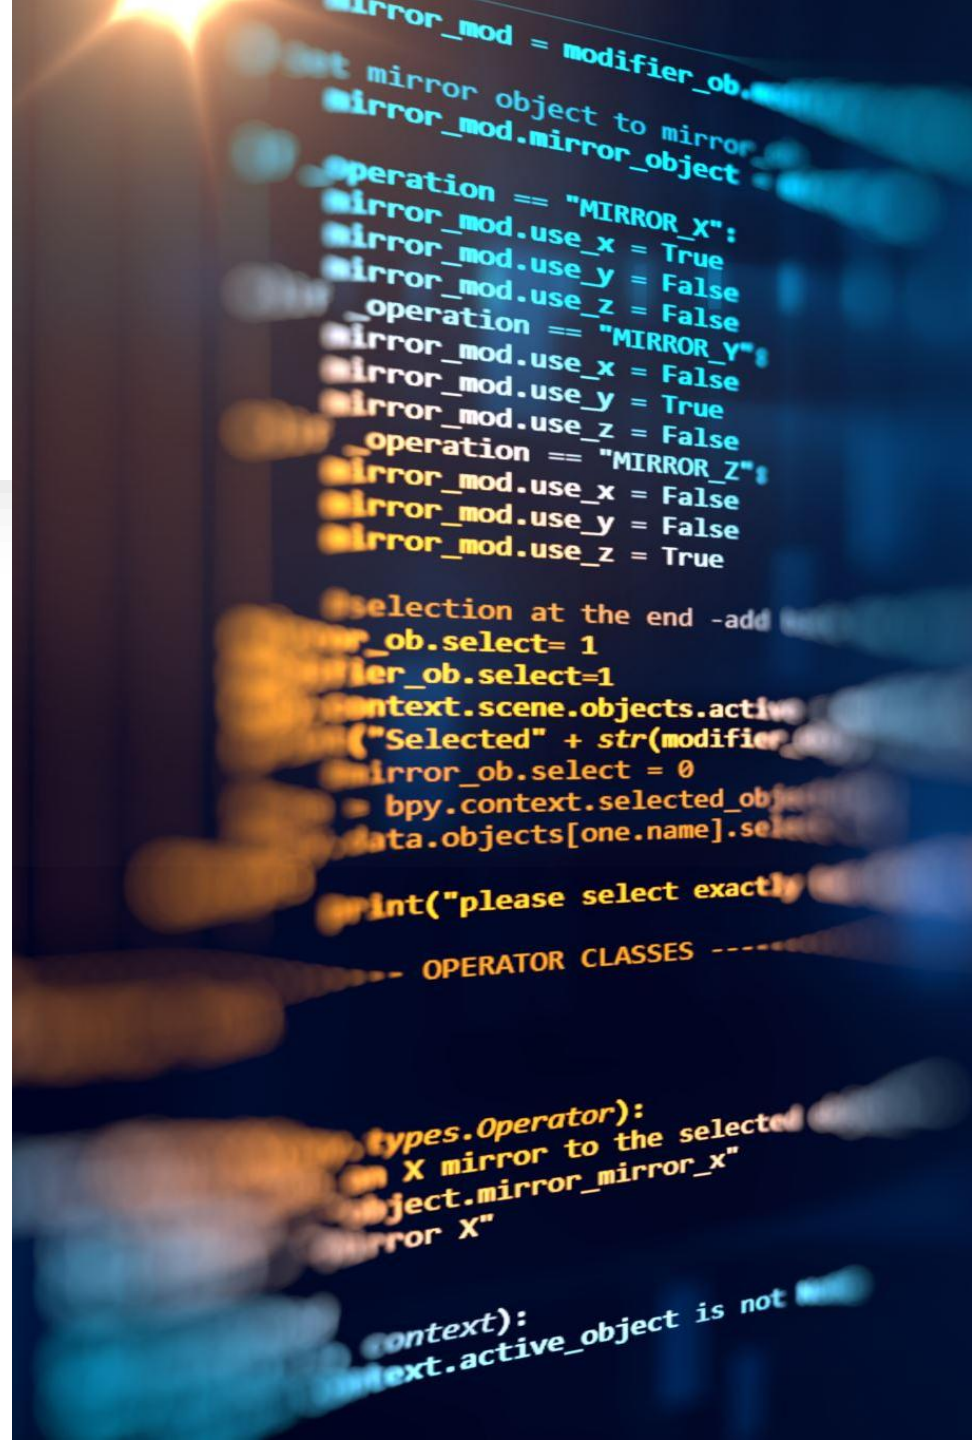

(Week 12: Hands-on Project)

Ahmad Khadijah Joda

Project Overview

A web-based GPA Calculator

Built with HTML5, CSS3, and
JavaScript

Problem Statement

Students often do not know how to calculate GPA this is an easy way to calculate GPA accurately

Objectives

Provide a lightweight GPA tool for students to track and export their semester/course GPA easily.

Technologies Used

- HTML
- CSS
- JavaScript
- LocalStorage

Application Features

- Multi-page navigation

- GPA calculation

- Course management

Local Storage

- Courses are saved in the browser using LocalStorage

GPA Calculation Logic

$$\text{GPA} = (\text{Sum of (grade_value} \times \text{credit_unit)}) / (\text{Sum of credit_unit})$$

Conclusion

The GPA Calculator is a simple and efficient web-based application designed to help students accurately compute and monitor their academic performance.
